PROJECTS (including all UX, UI, backend)

- **"Krave" food & alcohol delivery app:** Uses Yelp API to find stores, MapQuest API to map delivery route. **(Group, UCB).**
- **"Friend Finder":** full-stack app using Express, Node servers to craft survey, friend-match based on personality.
- **CR2C (Cancer Resources to Communities)** *in development:* local resources, fundraisers; includes zip code API.
- **"Barnyard Burger" restaurant app:** Node.js, Express, Handlebars, Object-Relational Mapping (ORM), model-view-controller (MVC) design, MySQL database; Heroku deployment. Burger menu, (3) columns, create-your-own burger option.
- **"Abstract React" memory game:** Via React; user recalls / clicks on images; app tracks current score, all-time high.
- **"Space Shuttle Scheduler" flight scheduler:** Using Firebase; allows user to input data; (4) input columns, (5) display columns: "Space Shuttle Name," "Destination," "Frequency," "Next Arrival," "Light Years Away."
- **"Zombie Trivia Game":** Collect brains by answering zombie trivia questions before timer runs out: 60 seconds, (8) questions. "Game Over" displays Brains (Correct Answers), Half-Brains (Wrong Answers), No Brains (Unanswered).
- **"Endless Retro 80s" application:** Used GIPHY API to build application, populating with gifs. Page automatically generates 10 buttons, each with an 80s theme. Search function, 80s soundtrack, "still" & "animate" functionality.
- **"Language Interpretation & Recognition Interface" (LIRI) CLI app:** Works from command line; interact, displays data in terminal / bash, via node.js. Send requests using Axios package to Bands intown, Spotify, OMDB APIs.
- **"Bamazon," storefront:** User orders products, from command line, using node.js, connecting to MySQL database.
- **"VetSx," for veterinarian practices & pet owners:** Vet technician enters real-time status of animals undergoing surgery; pet-owner receives status, vitals, pickup-time; asks return-questions. React, particles.js, CSS grid, Bootstrap. **(Group, UCB).**
- "**Bounty,**" web app for people needing a service, or errand run. Individuals post request; service providers post fee, receive payment for fulfilling request. Helped build initial concept, site layout, UI. **(Group, UCB).**
